

## UVA-5 / UVA-6

The UVA-5 is a new a multi-faced lens technology, which focuses the beams from multiple light emitting diodes into a single spot at a given distance. This magnifies your leak detection power, making it even easier to find leaks in tight areas.

The UVA-5 battery powered lamp (3 batteries size AA) for UV-fluorescent leak detection is compact and has an integrated power switch at the end of the handle. Batteries-lifetime expectancy is a minimum of 6 hours. The LED-heads for UV and white-light can be changed in a very fast way. The UVA-6 includes also a flexible extended neck for long reach and two additional LED-heads, one for white-light and one for UV-light "**MagniFocus**" which provide a small concentrated spotlight of about 5 cm diameter at 300-350 mm distance. The "**Standard UV**" and white-light versions provide a 16 cm diameter spot at 25 cm distance.
